## **DETAILED ACTION**

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims **21-23**, drawn to a method, classified in class 438, subclass **128**.
  - II. Claims 1-20, drawn to a device, classified in class 257, subclass 204.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case unpatentability of the Group II product invention would not necessarily imply unpatentability of the Group I process invention, because the product of the Group II invention could be made by a materially different process from that of the Group I invention. For example, the product of claim 1 could be made by a method for fabricating a semiconductor integrated circuit comprising the steps of manually synthesizing the semiconductor integrated circuit by determining a wiring pattern between a first cell comprising a plurality of transistors and a second cell comprising a PMOS transistor section and an NMOS transistor section, a wiring pattern between the plurality of transistors in the first cell, and a wiring pattern between the

Application/Control Number: 10/720,764

Art Unit: 2826

PMOS transistor section and the NMOS transistor section in the second cell in accordance with a predetermined scheme using human logic and intuition, cooperation and planning, and examination of prior schemes and experimentation to test new ideas and determine their worth, wherein the PMOS transistor section comprises a first PMOS transistor and a second PMOS transistor connected to the first PMOS transistor in series, and the NMOS transistor section comprises a first NMOS transistor and a second NMOS transistor connected to the first NMOS transistor in series; and fabricating the manually synthesized semiconductor integrated circuit, a method materially different from the method of claim 21.

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

## Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas L Dickey whose telephone number is 571-272-1913. The examiner can normally be reached on Monday-Thursday 8-6.

Application/Control Number: 10/720,764

Art Unit: 2826

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Nathan J Flynn can be reached on 703-308-6601. The fax phone number

for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published

applications may be obtained from either Private PAIR or Public PAIR. Status

information for unpublished applications is available through Private PAIR only. For

more information about the PAIR system, see http://pair-direct.uspto.gov. Should you

have questions on access to the Private PAIR system, contact the Electronic Business

Center (EBC) at 866-217-9197 (toll-free).
